

## Authoritative Sources

<b>RANKING LEGEND</b>	Primary Source: Excellent / Preferred	✔	These sources are created directly by the entity (a.k.a., service provider). Information from these sources can be used to update structures for entry into the database.
	Secondary Source: Conditional / Acceptable	!	These sources are typically created by: a) service recipients, or parties receiving services from the structure/entity; or b) regulators governing the entity's operations. There is a slight risk to these because secondary sources are not updated as frequently/quickly as primary sources, and may not reflect recent name changes, relocations, etc.  Information from these sources can be used to update structures if all others have been exhausted. <b>**Before using these, make note of how often the information is updated.**</b>
	Aggregate / Third Party Source: NOT AUTHORITATIVE	✘	Authors of these sources are neither service providers nor service recipients. They are third-party entities that consume and distribute information about service providers.  Users are discouraged from using these since we cannot verify the source or accuracy of this information.

The list below provides examples of authoritative sources for each structure type and their corresponding rank/preference as a source.
